Children are close to nature in a garden. A small well kept garden is fun, safe, healthy exercise for both children and adults. Harvesting the abundant crop gives the same pride and satisfaction to the gardener as a full game bag to the hunter or a bountiful catch to the fisherman.

LET'S HAVE A GARDEN

There is nothing quite so exciting as planting a few tiny seeds, covering them with good earth, and waiting for them to spring out of the ground full of pep, vim and vigor. From a tiny seed, a huge plant can develop. This is one of Nature's greatest mysteries.

Gardening is one of the oldest and most rewarding projects of civilized man. Gardening draws the family together in a healthy, interesting project that costs little, provides healthy exercise, returns large dividends and is a real convenience for the busy housewife when she needs a few radishes, an onion or two or perhaps lettuce for a salad.

It doesn't take much room for a garden. A plot 10 ft. wide and 10 to 20 ft. long in a sunny location will produce a lot of high vitamin food. Talk it over with the family; pick out five or more of the vegetables they like best; order seed of Robsons high quality home garden varieties (* in this catalog). Mail your order and you will receive with your seed a free copy of Robsons Home Garden Guide. Follow this guide and you will find gardening an interesting and rewarding project.

If you have a gardening problem, write us—perhaps we can help.

GREEN BUSH SNAP BEANS

Vitamins A b₁ C b₂

Pkt. will plant 20 ft. row; a pound 150 ft.

8 SLENDERGREEN: 54 days. Slendergreen is similar to Tendergreen in color, however, the pods are slimmer and much smoother making them especially attractive. Pkt. 25¢; ½ lb. 65¢; 1 lb. 95¢; 2 lbs. \$1.85; 5 lbs. \$2.85; 15 lbs. \$6.95; 50 lbs. \$20.85.

Every year new beans are introduced. Most of them gradually fade away; but Tendergreen is still the most popular green bean.

★**10 TENDERGREEN:** 53 days. We believe that the long, round, high quality pod of Tendergreen still keep it at the top of the list as a green bush bean for the table, canning and freezing. Pkt. 25¢; ½ lb. 60¢; 1 lb. 95¢; 2 lbs. \$1.75; 5 lbs. \$2.65; 15 lbs. \$6.50; 50 lbs. \$19.25.

13 CONTENDER: 51 days. An early green bean, resistant to common bean mosaic. Pods are oval or semi round. Recommended for market or roadside stand. Pkt. 25¢; ½ lb. 60¢; 1 lb. 95¢; 2 lbs. \$1.75; 5 lbs. \$2.65; 15 lbs. \$6.50; 50 lbs. \$19.25.

YELLOW BUSH SNAP BEANS

Vitamins a b₁ C b₂

Pkt. will plant 20 ft. row

★**24 PENCIL POD BLACK WAX:** 56 days. In our opinion Pencil Pod is still the best wax bean for home gardeners to grow. The round pods have a clear rich yellow color, are firm and solid like pencils, stringless, brittle, free of fibre, and outstanding in flavor and good eating quality. Fine for canning and freezing. Pkt. 25¢; ½ lb. 65¢; 1 lb. 95¢; 2 lbs. \$1.85; 5 lbs. \$2.85; 15 lbs. \$6.95; 50 lbs. \$20.85.

29 KINGHORN WAX: 56 days. Increasingly popular because of its high quality round pods and pure white seeds, which make an attractive frozen and canned appearance. Pods are golden yellow, slightly curved 5-6 in. long, tender, fleshy, stringless and of fine flavor. Pkt. 25¢; ½ lb. 65¢; 1 lb. 95¢; 2 lbs. \$1.85; 5 lbs. \$2.85; 15 lbs. \$6.95; 50 lbs. \$20.85.

BUSH LIMA BEANS

Vitamins a B₁ c b₂

Pkt. will plant 10 ft. row; ½ lb. 35 ft.

★**35 FORDHOOK U.S. 242:** 75 days. Fordhook 242 is the best large seeded bush lima bean for both market and home use. It has proven itself more productive and much more dependable even under unfavorable weather conditions than the old Fordhook. Pods are uniform and well-filled with plump, thick oval beans of finest quality. The flavor is delicious and is not only excellent to eat fresh but is also best for freezing and canning. Pkt. 25¢; ½ lb. 60¢; 1 lb. 90¢; 2 lbs. \$1.75; 5 lbs. \$2.65; 15 lbs. \$6.55; 50 lbs. \$19.65.

Many gardeners complain that they have had trouble getting a set of large limas. Fordhook 242 produces a crop when other varieties fail.

36 TRIUMPH: 72 days. A new "baby lima" that has taken the place of Baby Potato because of superior quality. The pods are small, about 3 in. long and are tightly filled with 3 or 4 thick delicious small beans. The flavor is excellent and they hold their green color well for both canning and freezing. Pkt. 25¢; ½ lb. 65¢; 1 lb. 95¢; 2 lbs. \$1.85; 5 lbs. \$2.75; 15 lbs. \$6.90.

SHELL BEANS

Vitamins B G Pkt. will plant 20 ft. row.

50 SENECA HORTICULTURAL: 60 days. A favorite in New England and many other sections, Seneca Horticultural is used as a green shell bean to be eaten fresh, canned or frozen. Seneca is an early strain of Horticultural or Cranberry bean that produces heavy yields of pods 6 to 8 in. long, straight and heavily splashed with bright red. Seeds large, pinkish-buff mottled with red. Pkt. 25¢; 1/2 lb. 60¢; 1 lb. 90¢; 2 lbs. \$1.75; 5 lbs. \$2.75; 15 lbs. \$6.85; 50 lbs. \$20.45; 100 lbs. \$36.75.

POLE BEANS

A woven wire fence makes an ideal support for pole beans, or you can use poles. Plant 5 or 6 beans around each pole and thin to 3.

54 BLUE LAKE FM-1 SNAP BEAN: 58 days. A new superior stringless strain of the famous Blue Lake pole bean. Pods are smooth, round, dark, 5 1/2 in. long and are borne over a long period. Pkt. 25¢; 1/2 lb. 80¢; 1 lb. \$1.15; 2 lbs. \$2.15; 5 lbs. \$3.45; 15 lbs. \$8.75.

★56 SCOTIA SNAP BEAN: 72 days. Probably Blue Lake FM-1 will, under most conditions, outyield Scotia but Scotia has a "buttery" flavor that we have never found in any other snap bean. Scotia pole beans will give you more beans over a longer season than the bush varieties. Pkt. 25¢; 1/2 lb. 65¢; 1 lb. 95¢; 2 lbs. \$1.85; 5 lbs. \$2.85; 15 lbs. \$6.95.

58 KING OF THE GARDEN LIMA: 88 days. We have replaced Early Leviathan pole lima with King of the Garden because it is more productive, more consistent in producing a good crop, and it is equally fine in quality. Vines vigorous, strong climbers, 8 to 10 ft. Pods are 5 to 6 in. long, flat and smooth with 4 to 5 large, flat, pale green seeds per pod. Pkt. 25¢; 1/2 lb. 60¢; 1 lb. 90¢; 2 lbs. \$1.75; 5 lbs. \$2.65.

CAULIFLOWER

Vitamins a b₁ C b₂

1 oz. should produce 2000 plants.

★174 **NEW ROYAL PURPLE HEAD:** 73 days. To us an outstanding home garden variety because of its superior eating and freezing quality. The heads grow large and are deep purple on top but turn green when cooked. It tastes a great deal like Broccoli but is even better flavored. Heads mature over a relatively long period and tying is not necessary.

170 **EARLY SNOWBALL:** 55 days. The best strain for extra early crop. Heads of good depth, solid, ivory white and of fine quality.

171 **SNOWBALL PERFECTED STRAIN:** 60-65 days. The standard variety for the Northeast. This strain is probably planted more widely than any other. The heads are deep and heavy, of uniformly good size, beautifully white and with a tight attractive curd. An abundance of long leaves close to the head make it largely self-protecting.

175 **SENECA SNOWBALL:** 58 days. Seneca Snowball is a new sure-heading strain maturing a little earlier and more evenly than Perfected Strain of Snowball. The curds are snow white, deep, tight and well-formed with good leaf protection.

★178 **CAULIFLOWER BLEND:** The home gardener and commercial grower with a small acreage needs cauliflower over a longer season than is possible with our new uniform maturing varieties. We are offering a blend of standard varieties that will, we believe, give the grower the longer harvesting season.

176 **SENECA SNOWBALL "B" STRAIN:** 58 days. A new selection of this very popular cauliflower. Even more uniform giving a larger percentage of the heads at a single cutting. The heads are large, white, uniform size with good leaf coverage. We recommend that commercial growers try Snowball "B" Strain this coming year.

★242 **WISCONSIN SMR 15:** 56 days. ★243 **MINCU:** 53 days. A high quality cucumber for pickling and as a first early cucumber for slicing. Fruits are white spined, short and blocky, with small seeds. Excellent for home garden. Pkt. 25¢; ½ oz. 55¢; oz. 85¢; ¼ lb. \$1.30; ½ lb. \$2.25; 1 lb. \$3.75; 5 lbs. \$18.00.

★251 **MARKETER:** 70 days. Marketer is deservedly the leading market variety today because of its deep green color, trim shape, size and heavy yields. Fruits are smooth, slender 7 to 8 inches long, tapered at the ends. It is susceptible to mosaic disease; if mosaic has been a problem for you—better plant Burpees Hybrid. Pkts. 20¢; ½ oz. 35¢; oz. 55¢; ¼ lb. \$1.05; ½ lb. \$1.70; 1 lb. \$2.75; 5 lbs. \$12.50; 10 lbs. \$22.50; 25 lbs. \$52.50.

252 **LONG MARKETER:** 70 days. Long Marketer is similar to Marketer, but grows about an inch longer. Our special strain of Long Marketer is smoother and more uniform in shape than other strains. It produces a fancy grade of slicers and larger net returns to the grower. Many growers prefer Long Marketer above Marketer. Pkts. 25¢; ½ oz. 40¢; oz. 65¢; ¼ lb. \$1.25; ½ lb. \$2.00; 1 lb. \$3.45; 5 lbs. \$16.00; 10 lbs. \$29.50; 25 lbs. \$70.00.

Long Marketer, a heavy producer, is we believe a cucumber for the grower who has equipment for a regular spray program. Most small gardeners should plant hybrids.

253 **BURPEE HYBRID:** 60 days. A high quality cucumber for both the home gardener and the commercial grower. This first generation F_1 Hybrid is a white spine slicing type cucumber, tapered at the ends, highly resistant to mosaic and downy mildew. Vines are extremely vigorous, bearing fruits 8 in. or more long. Medium seed cavity, crisp white flesh of excellent quality. Burpee Hybrid should be planted as soon as possible after soil is thoroughly warm. Popular market hybrid. Pkt. (50 seeds) 50¢; 2 pkts. 95¢; 3 pkts. \$1.35; ½ oz. \$2.75; oz. \$4.25; ¼ lb. \$12.50.

Joe Robson in his right hand holds a typical Marketer Cucumber; in his left, a Surecrop Hybrid. This picture however, does not tell the whole story. The heavy yields, uniformity of shape and size together with remarkable disease resistance makes Surecrop Hybrid the better buy for the home gardener.

★254 **SURECROP HYBRID:** 64 days. Surecrop is a true F_1 Hybrid that is outstanding in its ability to set fruit early and continues to produce good, well-shaped fruits over a long period of time. Fruits are dark green, white spined, straight, and average 7 to 9 in. long. The vines are vigorous and resistant to mosaic. A wonderful home garden variety. Pkt. (50 seeds) 50¢; 2 pkts. 95¢; 3 pkts. \$1.35; ½ oz. \$2.75; 1 oz. \$4.25; ¼ lb. \$12.85.

256 **ASHLEY:** 61 days. Ashley is a heavy yielding, downy mildew resistant cucumber developed by Dr. W. C. Barnes of South Carolina. Slim, tapered dark green fruits hold their color well with that glossy finish, which makes Ashley not only a good home garden variety but an excellent market variety. Pkt. 20¢; ½ oz. 35¢; oz. 50¢; ¼ lb. 95¢; ½ lb. \$1.50; 1 lb. \$2.60; 5 lbs. \$12.00; 10 lbs. \$23.00; 25 lbs. \$52.50.

HOME GARDEN AND ROADSIDE STAND HYBRIDS

Golden Cross Bantam, our first true hybrid is still popular for the home garden. The ear is large and quality is good.

217 GOLDEN CROSS BANTAM: 84 days. An old favorite that is still widely grown because of its dependable quality both fresh and frozen. Ears are long, attractive, with deep, golden yellow kernels. Golden Cross, unfortunately, has little resistance to bacterial wilt. Pkt. 25¢; ½ lb. 60¢; 1 lb. 80¢; 2 lbs. \$1.55; 5 lbs. \$3.55; 10 lbs. \$6.40; 25-100 lbs. 59¢; 100 lbs. or more 55¢ per lb.

Barbecue is an excellent second early sweet corn for the home garden. Probably too small an ear for most markets.

212 SENECA GOLDEN: 72 days. Developed and introduced by our plant breeders in 1930, Seneca Golden is still one of the outstanding hybrids for the Northern United States and Canada. It produces a 5½ ft. stalk with tall erect tillers. Ears medium long and cylindrical with 12 rows of deep yellow kernels.

The snapped ear of Seneca Golden has excellent market appearance and when harvested at optimum maturity is most delicious.

Seneca Golden fills the gap between early and midseason varieties and is being used extensively in this season. Moderately resistant to wilt. Pkt. 25¢; ½ lb. 70¢; 1 lb. \$1.15; 2 lbs. \$2.25; 5 lbs. \$4.50; 10 lbs. \$8.30; 25-100 lbs. 78¢; 100 lbs. or more 74¢ per lb.

204 BARBECUE: 74 days. A choice quality hybrid developed by Dr. Lachman in Mass. Barbecue matures just after Seneca Golden. Somewhat small eared for this season but its smooth glossy husk and excellent quality are fine for roadside markets.

Slender ears, 7½" long, with 12 rows of rich golden kernels. Snapped ear appearance is excellent and the quality of this hybrid will build repeat sales. Moderate wilt resistance. Pkt. 25¢; ½ lb. 60¢; 1 lb. 80¢; 2 lbs. \$1.55; 5 lbs. \$3.55; 10 lbs. \$6.40.

HOW TO FREEZE CORN ON THE COB

To successfully freeze sweet corn on the cob, a variety with a small cob gives best results. We suggest using Seneca Chief. Ears should be blanched in boiling water for 6 minutes and cooled immediately in ice water. Ears can then be placed in cellophane bags and placed in the freezer.

To prepare corn for table use, remove it from the cellophane bags, place in a shallow tin and heat in oven until the ears are thoroughly warmed through to the center of the cob.

MARKET HYBRIDS CONTINUED

Seneca Sunbeam is an early market corn that takes a lot of risk out of early planting. In our early spring planted trials, there has been much less damage from low temperatures.

214 SENECA SUNBEAM: 64 days. NEW: An early market corn growing 4½ ft. tall, few tillers-erect growth. **Black green foliage and husk color.** Ears medium large but cylindrical, with excellent ear leaves. 12-14 rows of narrow tasty kernels, tips nicely filled. **Extremely cold resistant,** will emerge and grow when conditions are tough.

Seneca Wampum is grown extensively in the South where a leaf blight called *Helminthosporium* is a serious problem. In the last few years there is some indication that the disease is moving North.

ALL CORN SEED IS TREATED

All our sweet corn seed is treated with a fungicide and an insecticide to protect the seed from wire worms, seed corn maggot and from rotting in the ground. Permits earlier planting.

224 SENECA SUPERMARKET (Improved Ioana): 88 days. An exceptionally uniform hybrid that is heat and drought resistant, and also very resistant to wilt.

The ability of this hybrid to withstand adverse growing conditions has made it a favorite with market growers. Plants are dark green, strong and erect with few tillers. The cylindrical 8" ears with 12-14 rows have good husk coverage and flag leaves. Tips are blunt and completely filled with medium golden kernels.

Seneca Supermarket is easy snapping and the blunt tips make it easy for pickers to judge maturity. Seneca Supermarket is being grown successfully in many market areas and its uniformity and type is filling the demand of critical buyers. 5 lbs. \$4.40; 10 lbs. \$8.10; 25-100 lbs. 76¢; 100 lbs. or more 72¢ per lb.

Seneca Supermarket has replaced the once popular Ioana Hybrid. Seneca Supermarket is more drought resistant, has better tip fill and more uniformity in size of ear.

227 SENECA WAMPUM: A sister hybrid to Seneca Warpath with the same tall vigorous 7-8 ft. plant and uniform double earing. The ear of Seneca Wampum is a little more cylindrical and the husk and flag leaves are darker green and more glossy. Where *Helminthosporium* is present Seneca Wampum carries greater resistance to this serious corn leaf disease.

Seneca Wampum will give an attractive five dozen pack. If Seneca Warpath has produced too large an ear under your conditions, Seneca Wampum will be preferred.

Ears 8" long with 14-16 rows of small narrow kernels and well filled ears.

Seneca Wampum gives top yields and a fancy pack, it holds well in transit and is preferred by the buyer. 5 lbs. \$4.10; 10 lbs. \$7.50; 25-100 lbs. 70¢; 100 lbs. or more 66¢ per lb.

★426 BUTTERNUT: 100 days. More popular with both home and market gardeners every year because it is just the right size for serving the average family; it is easy to peel and prepare for the table; it has a distinctive flavor and high quality; and it is the only variety that is not attacked by squash vine borers. Our Butternut is an extremely uniform strain producing fruits 7 to 9 inches long with a neck about 4 inches in diameter which is solid flesh. The seed cavity is small and is located in the lower bowl-shaped end; skin color is a light creamy brown. The flesh is yellow, fine grained, dry, of good quality and is a good keeper. Pkt. 25¢; ½ oz. 45¢; oz. 65¢; ¼ lb. \$1.60; lb. \$4.50; 5 lbs. or more \$4.25 per lb.

429 GREEN DELICIOUS: 103 days. This variety has long been a favorite with home and market gardeners; one of the best of the smaller high quality squash. Fruits are broad top-shaped, commonly 7 to 8 inches long. Skin is very dark green, fairly smooth. Rind is thin but hard. Flesh is extremely thick, bright yellow, fine grained and dry, without fibre, and of highest quality. Pkt. 20¢; ½ oz. 35¢; oz. 50¢; ¼ lb. \$1.05; lb. \$2.75; 5 lbs. or more \$2.50 per lb.

★431 QUALITY: 103 days. Attractive dark green heart-shaped fruits have thick, deep orange flesh that is fine grained, dry, without fibre. Fruits just the right size, 5 to 10 lbs. Popular with both home and market gardeners. Pkt. 20¢; ½ oz. 35¢; oz. 45¢; ¼ lb. 95¢; lb. \$2.50; 5 lbs. or more \$2.25 per lb.

Quality Squash is much like Green Delicious in appearance but a little better eating quality.

433 BLUE HUBBARD (Eastern grown): 105 days. Our strain of Blue Hubbard we believe is more uniform in type and of better quality than other New England type strains. Squash are large, averaging 30 lbs. in weight, long, pointed at both ends, slightly ridged with a very hard blue-gray rind and small seed cavity. Flesh yellow-orange, thick and of excellent quality. One of the best keepers and fine for freezing. Pkt. 25¢; ½ oz. 50¢; oz. 75¢; ¼ lb. \$1.85; 1 lb. \$5.25; 5 lbs. or more \$5.00 per lb.

Last year we had a wonderful yield of Butternut Squash—still had a few left in February.

471 FIREBALL: 65 days. A first early variety that has become very popular for the home garden and local markets. The plant is small. To secure maximum yields the plants should be set as close as 1 to 1½ ft. in the row. The fruit is round, medium size and produced in great abundance. Truly a valuable addition to our list of tomato varieties. Pkt. 25¢; ½ oz. 75¢; oz. \$1.40; ¼ lb. \$4.50; lb. \$15.00; 5 lbs. or more \$12.00 per lb.

CERTIFIED VIRUS AND NEMATODE FREE DORMANT STRAWBERRY PLANTS

POCAHONTAS: An outstanding commercial mid-season variety introduced by the U.S. Dept. of Agriculture in 1953. Berries are of a light bright red color, solid and with tart flavor. One of the best berries for freezing. Heavy bearer. Widely adapted to soils and climates. See prices below.

★SPARKLE: Highly recommended by the N.Y.S. Experiment Station as a superior freezing variety. The berries are a bright glossy red, of excellent quality, medium to large in size, smooth and uniform. They are firm in texture and hold up well. Yields are high; ripens after Fairfax and Robinson. See prices below.

★FAIRFAX: One of the more popular older varieties ripening a few days earlier than Sparkle. It yields heavily when well grown in rich soil and the large firm conic shaped berries have an excellent flavor and sweetness. The color is a deep glossy red when first ripe, turning quite dark as they get older. See prices below.

I am writing to you because I have never seen such nice strawberry plants. The Pocahontas are growing very well.

John Strecker
Elmont, N. Y.

★ROBINSON: Introduced in Michigan a few years ago, Robinson has rapidly become a leading mid-season variety. Robinson is a prolific plant maker and a tremendous yielder. We have never seen a variety set more berries, large in size and ripen them. The berries are a beautiful light red, conic in shape, often ribbed and of good table quality. Berries are borne higher than other varieties and are therefore easier to pick and also they are not as apt to get sandy and dirty. See prices below.

EMPIRE: A new early, unusually attractive berry developed by Dr. G. L. Slate of the N.Y.S. Experiment Station. Empire is extremely productive, ripens just after Premier, is extra large and holds its size throughout the season. The conical fruits are bright, glossy red and the quality is fine. Plants are vigorous, heavy yielding and produce runners freely. See prices below.

SUPERFECTION EVERBEARING. One of the most dependable everbearers in producing an early summer crop and another in late summer. The good-sized, round, smooth, bright red berries are firm and sweet with a delicious tart flavor. See prices below.

LAWN GRASS

Seneca Lawn Mixtures

For New Lawns sow 1 lb. per 500 sq. ft.

ONLY OUR EXTRA FANCY GRADE SEED IS USED IN SENECA LAWN MIXTURES

SENECA LAWN MIXTURE

The Best All-purpose Lawn Grass Mixture

For establishing a fine thick permanent lawn under average soil conditions we highly recommend our Seneca Lawn Mixture which is especially prepared from the highest quality grass seeds produced. It makes a smooth, green, velvety lawn with a thick bottom free from clumps. The mixture is composed of the following grasses (percentages are approximate): 75% Kentucky Blue Grass, 18% Pennlawn Red Fescue, 5% Red Top, 2% Wild White Clover.

Kentucky Blue Grass makes the thick basic turf; it responds to good fertility (likes a limestone soil or well-limed soil) and flourishes in spring and fall. Pennlawn Red Fescue is deep-rooted and thrives under adverse conditions including hot weather and poor, sandy soils. Wild White Clover blends well with the other grasses, stays green all summer and enriches the soil. 1/2 lb. 90¢; 1 lb. \$1.60; 5 lbs. \$7.70; 10 lbs. \$14.90; 20 lbs. \$28.80; 50 lbs. \$69.65 prepaid.

WEEDEZ WONDER BAR

The Weedez Wonder Bar is formed of wax and impregnated with 2,4-D weed killer. You simply drag the bar across the lawn to be treated. The bar deposits a thin film of the wax upon the plants that cannot be blown off by wind or washed off by rain. In ten days to two weeks susceptible broadleaf weeds will be gone. Treats a lawn 100 feet wide by 200 feet deep, or smaller yards for several seasons. 22" Wonder Bar \$4.98 Prepaid.

CYCLONE SEED SOWER

For Sowing All Kinds of Seed Broadcast

The Cyclone Seed Sower is known and used in most all countries of the world where seed is sown broadcast. Hundreds of thousands of farmers in America, Europe, Canada and elsewhere have relied on it for many years to rapidly and uniformly distribute alfalfa, clover, ryegrass and grains and seeds that are sown broadcast.

The Cyclone Seeder is suspended by a web strap over the shoulder and hangs in the most convenient manner to carry and operate. Full directions for operating are attached to each machine. \$4.95 delivered.

SENECA SHADY LAWN MIXTURE

Shady areas are a problem. Many times it is because of low fertility rather than shade that causes those bare spots in the lawn. Some trees are heavy feeders close to the surface. If there is adequate plant food in the soil our Shady Lawn Mixture makes a beautiful turf in the shady spots. Our mixture contains the following special grasses (percentages are approximate): 50% Illahee Fescue, 15% Kentucky Blue Grass, 25% Poa trivialis, 5% Colonial Bent, 5% Red Top. This combination provides grasses that will succeed in dry or moist locations in fairly deep shade or, moderately sunny spots. 1/2 lb. 80¢; 1 lb. \$1.35; 5 lbs. \$6.35; 10 lbs. \$12.20; 20 lbs. \$23.40; 50 lbs. \$55.85, prepaid.

ECONOMY GRASS MIXTURE

Annual Seeding

There are often places so heavily shaded that permanent grasses cannot be established. There may also be ground around new houses for instance where permanent lawns are desired but cannot be established at present because of the high cost of good lawn mixtures or because ground has not been permanently graded. For such conditions we suggest sowing this inexpensive mixture of quick growing grasses (45% Timothy, 40% Annual Rye Grass, 15% Perennial Rye Grass) it will cover the ground and remain green until late summer. Very heavily shaded areas will have to be fertilized and reseeded each year. 1 lb. 65¢; 5 lbs. \$2.35; 10 lbs. \$4.20; 20 lbs. \$7.40, prepaid.

AMMATE WEED KILLER

A new weed killer for use where it is desired to kill all vegetation. Ammate should not be used on lawns as it will not only kill the weeds but will damage the grass. 2 lbs. \$1.55; 6 lbs. \$3.65 Prepaid.

WEED-B-GON

The Hormone Weed Killer, containing 2,4-D and 2,4,5-T low volatile esters for use against dandelion, plantain, wild onion, poison ivy, poison oak, wild blackberry vines, bindweed, or wild morning glory. Can be used on grass lawns for broad-leaved weed control, dandelion, etc. It's very economical, a little goes a long way. 8 oz. can \$1.25; pint can \$1.75.

Our garden would not be a garden without the Seneca Chief Corn. It is always the pride of the neighborhood.
